SUMMARY

Senior Software Engineer with 8+ years of experience designing and delivering scalable products across healthcare, fintech, and enterprise software. Experienced in building AI-enabled applications, workflow automation systems, and operational platforms that improve decision-making and business outcomes. Demonstrated ability to take ownership of complex initiatives, collaborate across functions, and rapidly turn ideas into production-ready solutions in high-growth environments.

EXPERIENCE

Mochi Health, San Francisco (Remote) — *Senior Full-Stack Engineer*

DEC 2024 - APR 2026 (1yr 5 mos)

Mochi Health is an early stage, hypergrowth B2C startup in the Telehealth space. Worked as a lead full stack engineer in the Clinical Operations team overseeing development and handling all on-call responsibilities within the team.

Clinical Operations:

- Tech Stack - React, Redux, Node, Knex, Postgres
- Leading the engineering team in implementing Providers (Doctors) specific features.
- Collaborates with the support team and the providers to help them resolve issues and build tools to increase their productivity.
- Implemented the credentialing cases feature for the insurance team.
- Built collaborating physicians feature to facilitate managing multiple Nurse Practitioners across all states of the US.

Landing Page:

- Tech Stack - NextJS
- Led the implemented the new landing pages for the company.
- Added user session recording using Fullstory and Posthog analytics.

Pulley, San Francisco (Remote) — *Senior Full-Stack Engineer*

DEC 2020 - OCT 2024 (3 yrs 11 mos)

As an early employee, I helped scale the company to 80+ employees, becoming the top contributor by a margin. Represented the engineering team on customer calls, onboarded new hires, and resolved critical on-call issues. Earned multiple recognitions for impact and dedication.

SKILLS

Languages: Javascript/TS, Python, Go.

LLM: AI Agents, RAG, OpenAI API, Function/Tool calling.

Front-End: React, NextJS, Tailwind, React query.

Back-End: NodeJS, FastAPI, AWS, GraphQL, Redis, Docker.

Databases: PostgreSQL, SQLAlchemy, MongoDB.

Testing: Playwright.

EDUCATION

SRM University, India *Bachelors in Computer Science*

JULY 2013 - JUNE 2017 (4 yrs)

- Head of Innovations at Etros-Solar Racing. (ISIE, ESVC Winner)

- System Engineer at SRMSAT-2, student nanosatellite program

- Intern at DRDO's Centre for Artificial Intelligence Robotics lab

Valuation Platform:

- Tech Stack - React, Golang, OAPI, Postgres
- Led the frontend team in developing an internal platform for 409A and token valuations.
- Built dynamic request forms for gathering input for valuations.
- Added a user (analyst) friendly UI for valuation methodologies and implemented a report editor with HTML-to-PDF generation.
- The platform supported 1.8k valuations in the past 12 months.

Offer Letter Builder:

- Tech Stack - React, Golang, Postgres
- Sole engineer responsible for developing the first version of the offer letter builder tool, which became one of the most popular features.
- Developed backend endpoints with email integration and contract document execution, while also building custom UI components.

Communications Hub:

- Tech Stack - React, Golang, Postgres
- Led the frontend team in building a feature for companies to send updates to their investors and stakeholders.
- Integrated a rich text editor, email broadcasting, and file attachments, and implemented features for tracking read counts and managing different permission levels.

Zoho Corporation, Chennai — *Software Engineer*

MAR 2017 - DEC 2020 (3 yrs 10 mos)

As part of a research team, I developed several tools and led teams on multiple projects.

Graph Visualization Library:

- Tech Stack - Typescript
- Developed an interactive graph library for representing specific data models using nodes and edges.
- Implemented graph drawing and text collision algorithm.
- Optimized the library's performance to handle over 700 nodes

No Code Tool:

- Tech Stack - Angular, Golang, Postgres
- Helped initiate a full-fledged front-end builder tool
- Contributed to rapidly bringing the project from concept on the whiteboard to version 0 implementation.
